## Dorm Renovations

In 2016 an oil sands client approached the Bouchier team about a potential project for dorm (camp) renovations.

Thanks to careful planning and detailed mock-ups, awarded this new work scope to Bouchier. To date there have been 2160 rooms successfully upgraded with 1080 rooms remaining. The dorm renovations are no small task and require a broad skillset. Not only is the project team executing renovations but have also taken on doing a major sewer upgrade. This team is also scheduled to do potable water upgrade and begin renovating a new camp in early 2024.

Currently there are 39 employees per shift working to execute the project. Over the years the project required a vast group of trades personnel including plumbers, carpenters, electricians, skilled labourers, Sheetmetal & HVAC workers. For this oil sands company, Bouchier offers a wide range of services such as facility maintenance, project work, HVAC, pressure and vac, roads and grounds and special projects. With this skilled team no job is too big or small.

## The Outcome

The Dorm Projects at Horizon supports the growth that is occurring at this site, all while lowering the cost of dorms by 10%. Thanks to Bouchier's dedicated team, our client knows it can trust Bouchier to deliver on budget and communicate updates accordingly.

Bouchier has created a clean workplace standard that our client now brings to other contractors to help them understand the expectations. Time and time again, Bouchier has been the clients preferred contractor to do projects safely, on time, and within budget.
