Turn Around

In March 2023, Bouchier was approached by a client to complete a shutdown, or turnaround, at one of their sites. Despite the seemingly unattainable task within a tight timeframe, the Bouchier team persevered and delivered exceptional work.

The process started with the recruitment of a capable workforce, consisting of 60 new hires, 37 full-time employees, as well as management and supervision. The extensive scope of work required substantial labour support in areas such as plant maintenance, confined space monitoring, spark watch, and cleanup crews. Despite the potential for complications in the fast turnaround time, the Bouchier team approached the project with safety and efficiency in mind.

The shutdown preparation commenced in July 2023 with the shutdown completed by August. After the work concluded, Bouchier was then tasked with clean-up work that lasted until September. Although the shutdown project encountered some obstacles, Bouchier was able to adapt and overcome the changes in scope.

The Outcome

Bouchier successfully completed the work within the specified timeframe, ensuring minimal delays. Despite the challenges faced during the shutdown, effective communication and teamwork enabled a smooth operation. Bouchier's team received commendations from the client, acknowledging their outstanding efforts and performance.

"Bouchier went above and beyond in supporting this TA. They went out of their way to ensure needs were met always in a timely manner even when dealing with situations outside of their scope. Having them was a major reason for a successful and safe TA. Thank you for all your help!"
